What timeline are you looking at for a fermentation with 21st.BIO?

Other:

At what scale have you fermented your organism so far?

Other:

At what scale are you planning to ferment now?

Other:

Do you consider your seed train to be fairly standard (7 days or less)?

standard seed train

complex seed train

Are you planning to perform consecutive fermentations?

If yes, how many fermentations in total?

How long is your fermentation process (in days)?

Do you have an established tech transfer protocol?

yes

no

Things to consider about your host organism:

selection markers

sporulation

special inactivation requirements

antibiotics required
for fermentation

special media
considerations

health hazards or concerns

other:

Things to consider about your fermentation product:

special cleaning
requirements

health hazards
or concerns

downstream processing

other:
